About Me

Full Stack Software Engineer with 5+ years of experience building scalable web applications, automation platforms, and cloud-based solutions. Specialized in React, Next.js, Python, and modern backend architectures, with experience across frontend, backend, DevOps, and Google Cloud Platform.

Delivered high-impact automation systems, AI-powered applications, and enterprise solutions that improved operational efficiency and reduced manual processes. Passionate about software architecture, automation, and AI-driven innovation.

Skills

Frontend: JavaScript | CSS | HTML | Tailwind | Styled-Component | TypeScript | React | NextJS | Redux | Zustand | Axios | Playwright
Backend: Python | FastAPI | FlaskAPI | | JWT | Nodejs | Express | MongoDB | Postgresql - **DevOps:** Git | CI/CD | Docker | Linux - **Cloud:** Google Cloud Platform (GCP) - **IA:** LangChain, Qdrant, LLMs

Experience

Software Developer Mid-Level

Contabilizei

Curitiba, PR, BRAZIL

02/2026 - Current

Software Developer – Business Registration Automation Platform

Develop and maintain a large-scale automation ecosystem responsible for the company registration (CNPJ creation) process, significantly reducing manual effort and accelerating customer onboarding.

- Designed, developed, and maintained over 21 automation bots integrated into the end-to-end business registration workflow.
- Built automation solutions using Playwright to interact with government portals, perform data entry, retrieve documents, validate information, and execute registration procedures with minimal human intervention.
- Developed backend services using Python, Flask, and FastAPI to orchestrate automation workflows, manage integrations, and ensure system reliability.
- Leveraged Google Cloud Platform (GCP), including Cloud Run, Cloud Scheduler, and Pub/Sub, to build scalable, event-driven automation services.
- Improved operational efficiency by reducing manual processing time and increasing the throughput of company registration requests.
- Contributed to the continuous enhancement of automation reliability, monitoring, and error recovery mechanisms across critical registration processes.

Software Developer Mid-Level

Sidia - SAMSUNG

Manaus, AM, BRAZIL

07/2022 - 02/2026

Software Developer - Feature Validation in Binary Code for Pre-Release Samsung Devices (Latin America)

- Developed a solution for automated validation of features directly within the binary code used in Samsung mobile devices during the pre-release cycle for the Latin American market.
- The tool analyzes and validates the binary before it is applied to physical devices, enabling early detection of regressions and functional issues
- Reduced the validation time from 2–3 days to approximately 10 minutes, significantly accelerating the release cycle and improving delivery quality.
- Used by engineers and technical teams to ensure the integrity and compliance of new features before official rollout.

Software Developer - AI Chatbot for Sidia Internal Context

- Developed an intelligent chatbot using AI and NLP, capable of delivering accurate and secure answers based on sensitive and contextual Sidia documents, with a focus on privacy and data security.
- Built using LangChain and the LLaMA model, enabling deep reading and interpretation of complex documents, with adaptability across multiple query contexts.
- Implemented Qdrant as a vector database for efficient semantic retrieval, ensuring fast, relevant, and evidence-based responses.
- Designed custom prompts to provide highly contextual responses with direct document references, improving both user experience and answer precision. The system is currently under development with functioning responses; ongoing refinements aim to reduce hallucinations and enhance model reliability.

Tech Lead - Android Sample Manager for Remote Testing

- Led a legacy project focused on managing Android device samples connected to a remote test farm, allowing engineers to validate and test physical devices remotely without manual intervention.
- Responsible for gathering client requirements, understanding both technical and business needs, and transforming them into well-prioritized tasks.
- Managed the backlog and delivery schedule, ensuring high-quality results within deadlines.
- Coordinated task distribution within the development team, maintaining an efficient workflow and aligning team efforts with project goals.
- Maintained constant communication with the client, adjusting the roadmap based on feedback and shifting priorities.

Software Developer Mid-Level

Kodigos Software LTDA

Manaus, AM, BRAZIL

05/2021 - 06/2022

Software Developer – Document Management and Version Control System

- Developed a web-based CRUD system for document management and version control, providing an organized and efficient solution for storing and tracking document changes.
- Implemented edit tracking, including user identification and required change justifications, ensuring full traceability of modifications.
- Built a role-based access control system with permission levels for administrators and regular users, enhancing security and user-specific functionality.
- Used Vue.js and Vuetify on the front end to create a responsive, intuitive interface.
- On the back end, implemented C# with Entity Framework, using migrations to manage database schema changes efficiently.
- SQL Server was used as the primary database.
- Result: the system improved document organization and version control, increasing transparency and process reliability.

Software Developer Junior

Womp Telecom

Manaus, AM, BRAZIL

07/2018 - 04/2021

- **Developed a mobile application for corporate fleet drivers**
 - Implemented features for fuel control, vehicle maintenance management, and checklist execution.
 - Enables administrators to access collected data through a web-based system.
- **Developed a streaming application using Flussonic technology**
 - Built a system to convert multicast networks to unicast, enabling TV channel retransmission on a streaming platform.
 - Ensured seamless and optimized viewing experiences for end-users.
- **Developed an urban mapping application**
 - Focused on the registration and monitoring of city light poles with detailed attributes such as transformers, electrical networks, and fiber optic cables.
 - Integrated Google Maps for efficient asset identification and management.

Education

Bachelor's Degree in Computer Engineering

Uninorte - Laureate International

Manaus, AM, BRAZIL
